An SHI Company

Safeguard Your Assets & Achieve Compliance

Data Protection Blueprint

As the lifeblood of the modern businesses, organizational data is constantly under siege. So, it's not necessarily a question of why it's important to protect your data, but how to protect it.

Stratascale's Data Protection Blueprint helps security leaders map out every decision related to their data protection strategy, outlining clear plans and technical recommendations for data governance, classification, and protection. This engagement also includes the alignment of data protection strategy to compliance mandates including the documentation of data governance policies, standards, and procedures.

Establish Baseline & Current State

- Interviews & Enablement
- Data Protection Standards
- Tooling Requirements
- Compliance Requirement

Identify Gaps & Map Future State

- Standards
- Operational Runbooks
- Labeling Requirement
- Approved Data Storage Locations
- Incident Reporting & Response

Build Blueprint

- Data Classification Schema
- DLP Requirements
- End User Communications
- Business Aligned Tooling Recommendations

Beyond the Basics

While used interchangeably, data protection is not data security. Data protection goes one level deeper to not only safeguard your data but establish the policies and procedures necessary to ensure lawful use.

Our blueprint sets forth a holistic strategy that takes key input from the business as well as security teams, establishing a roadmap that meets the needs of the entire organization while helping you take a proactive vs. reactive security posture.

A Comprehensive Strategy is Within Reach

Partner with Stratascale to create a clear plan to safeguard your data so you can protect sensitive information, comply with data protection regulations, and maintain trust.
