Give Analyst Superpowers with a Citizen Data Science Program

Traditional approaches to business analytics aren't flexible enough in today's competitive landscape. Analytical leaders must modernize their data teams' skills to leverage advanced predictive or prescriptive analytics by implementing a Citizen Data Science Program (CDSP). A CDSP helps CIOs democratize their data analytical talent across their organization to fill in the knowledge gaps without incurring a high investment and enables organizations to generate more enriched business insights while gaining an edge over their competitors.
